

# Instagram User Analytics

## Project Description:

This project is an attempt to provide insights into questions asked by the management team by analysing the data provided by the product team of Instagram. To start with my analysis, I first understood the different metrics provided. I understood marketing and investor metrics. Then, I used the provided data for SQL analysis to find out the top-ranked oldest user, users who have never posted a single photo on Instagram, the most common hashtag, the total number of users, etc.

## Approach:

Analysed the objective of every task and looked for the actual data that the team required. Then I imported the data into MySQL Workbench and ran numerous queries to provide insights for business benefits.

N.B.- As I was using MySQL for the first time, I made numerous mistakes. I could not understand the queries sometimes. I took the help of different resources. This was a challenging step. Finally, after Eshan's Session, I understood things more clearly.

## Tech Stack Used:

MySQL Workbench 8.0

## Result:

### Marketing:

#### 1. Rewarding Most Loyal Users:

People who have been using the platform for the longest time.

Task: Finding the 5 oldest users of Instagram from the database provided.

### Query

```
1 Select id, Username, created_at
2 From ig_clone.users
3 order By created_at
4 Limit 5;
```

### Output

Query #1 Execution time: 1ms

id	Username	created_at
80	Darby_Herzog	2016-05-06 00:14:21
67	Emilio_Bernier52	2016-05-06 13:04:30
63	Elenor88	2016-05-08 01:30:41
95	Nicole71	2016-05-09 17:30:22
38	Jordyn.Jacobson2	2016-05-14 07:56:26

## 2. Remind Inactive Users to Start Posting:

By sending them promotional emails to post their 1st photo.

Task: Finding the users who have never posted a single photo on Instagram

Query	Output	
<pre>1 Select Username 2 From ig_clone.users u 3 Left Join ig_clone.photos p 4 On u.id = p.user_id 5 Where 6 p.user_id is Null 7 Order By Username</pre>	Aniya_Hackett	Jessyca_West
	Bartholome.Bernhard	Julien_Schmidt
	Bethany20	Kasandra_Homenick
	Darby_Herzog	Leslie67
	David.Osinski47	Linnea59
	Duane60	Maxwell.Halvorson
	Esmeralda.Mraz57	Mckenna17
	Esther.Zulauf61	Mike.Auer39
	Franco_Keebler64	Morgan.Kassulke
	Hulda.Macejkovic	Nia_Haag
	Jaclyn81	Ollie_Ledner37
	Janelle.Nikolaus81	Pearl7
	Tierra.Trantow	Rocio33

## 3. Declaring Contest Winner:

The team started a contest and the user who gets the most likes on a single photo will win the contest now they wish to declare the winner.

Task: Identifying the winner of the contest and provide their details to the team.

Query

```
1 Select likes.photo_id, users.username, count(likes.user_id) as
   like_user
2 From ig_clone.likes likes
3 Inner join ig_clone.photos photos
4 ON likes.photo_id = photos.id
5 inner join ig_clone.users users
6 ON photos.user_id = users.id
7 Group By likes.photo_id, users.username
8 Order By like_user DESC
9 Limit 1;
```

Output

photo_id	username	like_user
145	Zack_Kemmer93	48

#### 4. Hashtag Researching:

A partner brand wants to know, which hashtags to use in the post to reach the most people on the platform.

Task: Identifying and suggesting the top 5 most commonly used hashtags on the platform

Query	Output												
<pre>1 SELECT t.tag_name, 2 COUNT(p.photo_id) AS num_tags 3 FROM ig_clone.photo_tags p INNER JOIN 4 ig_clone.tags t ON p.tag_id = t.id 5 GROUP BY tag_name ORDER BY num_tags DESC LIMIT 5</pre>	<table><tr><th>tag_name</th><th>num_tags</th></tr><tr><td>smile</td><td>59</td></tr><tr><td>beach</td><td>42</td></tr><tr><td>party</td><td>39</td></tr><tr><td>fun</td><td>38</td></tr><tr><td>concert</td><td>24</td></tr></table>	tag_name	num_tags	smile	59	beach	42	party	39	fun	38	concert	24
tag_name	num_tags												
smile	59												
beach	42												
party	39												
fun	38												
concert	24												

#### 5. Launch AD Campaign:

The team wants to know, which day would be the best day to launch ADs.

Task: What day of the week do most users register on? Provide insights on when to schedule an ad campaign

Query	Output																
<pre>1 SELECT WEEKDAY(created_at) AS weekday, 2 COUNT(username) AS num_users 3 FROM ig_clone.users 4 GROUP BY 1 5 ORDER BY 2 DESC</pre>	<table><tr><th>weekday</th><th>num_users</th></tr><tr><td>3</td><td>16</td></tr><tr><td>6</td><td>16</td></tr><tr><td>4</td><td>15</td></tr><tr><td>1</td><td>14</td></tr><tr><td>0</td><td>14</td></tr><tr><td>2</td><td>13</td></tr><tr><td>5</td><td>12</td></tr></table>	weekday	num_users	3	16	6	16	4	15	1	14	0	14	2	13	5	12
weekday	num_users																
3	16																
6	16																
4	15																
1	14																
0	14																
2	13																
5	12																

## B) Investor Metrics:

### 1. User Engagement:

Are users still as active and post on Instagram or they are making fewer posts

Task: Provide how many times does average user posts on Instagram. Also, provide the total number of photos on Instagram/total number of users.

Query

```
1 WITH CTE AS ( SELECT u.id AS userid,
2 COUNT(p.id) AS photoid
3 FROM ig_clone.users u
4 LEFT JOIN ig_clone.photos p ON u.id = p.user_id
5 GROUP BY u.id )
6 SELECT SUM(photoid) AS total_photos,
7 COUNT(userid) AS total_users,
8 SUM(photoid)/COUNT(userid) AS photos_per_user
9 FROM CTE
```

Output

total_photos	total_users	photos_per_user
257	100	2.57

### 2. Bots & Fake Accounts:

The investors want to know if the platform is crowded with fake and dummy accounts

Task: Provide data on users (bots) who have liked every single photo on the site (since any normal user would not be able to do this).

Query	Output																												
<pre>1 WITH photo_count AS ( SELECT user_id, COUNT(photo_id) AS num_like 2 FROM ig_clone.likes 3 GROUP BY user_id 4 ORDER BY num_like DESC ) 5 SELECT * FROM photo_count WHERE num_like = (SELECT count(*)) 6 FROM ig_clone.photos)</pre>	<table><tr><th>user_id</th><th>num_like</th></tr><tr><td>75</td><td>257</td></tr><tr><td>21</td><td>257</td></tr><tr><td>24</td><td>257</td></tr><tr><td>91</td><td>257</td></tr><tr><td>36</td><td>257</td></tr><tr><td>41</td><td>257</td></tr><tr><td>14</td><td>257</td></tr><tr><td>76</td><td>257</td></tr><tr><td>54</td><td>257</td></tr><tr><td>57</td><td>257</td></tr><tr><td>66</td><td>257</td></tr><tr><td>5</td><td>257</td></tr><tr><td>71</td><td>257</td></tr></table>	user_id	num_like	75	257	21	257	24	257	91	257	36	257	41	257	14	257	76	257	54	257	57	257	66	257	5	257	71	257
user_id	num_like																												
75	257																												
21	257																												
24	257																												
91	257																												
36	257																												
41	257																												
14	257																												
76	257																												
54	257																												
57	257																												
66	257																												
5	257																												
71	257
